

Me imaeg

So image that i provided to you sould be above the background

And the image sould be interactive (i mean like the background image first it need to look noisy until the mouse is hovering over it )

When the mouse is hovering over the images of mine then image image need to be stable

But jus like <https://londonorris.com/> the main page in this website

But instead of the face being in the middle of the page , i want it be on the left of the screen

and the details of mine need to be on the right of my image

My image i.e; my eye balls need to to track the mouse pointer
