

01 — HERO

STRIKEFLY

A dedicated carry for the fight.

A compact leather bag designed around the everyday journey of boxing gloves.

IMAGE: Final on-body/front product photograph.

02 — BRIEF

Boxing gloves rarely have a place of their own.

Most are carried in generic gym bags, nylon sacks, or oversized duffles. STRIKEFLY explores a more considered alternative sized specifically for the gloves and the routine around them.

IMAGE: Simple comparison of nylon bag, mesh bag and leather duffle.

03 — OVERVIEW

A small bag built around one specific ritual.

The product follows the journey of the gloves from leaving for training to returning afterwards, combining quick access, comfortable carrying and a distinct visual identity.

PACK → CARRY → RETURN

Use the usage scenario as a simple visual sequence.

04 — INSIGHT

The bag had to work before and after the fight.

Research highlighted three recurring needs: keeping gloves easy to access, carrying them comfortably, and keeping them separate from the user's other belongings after training.

IMAGE: Three-stage user journey with the key needs highlighted.

05 — DESIGN RESPONSE

Keep the function simple. Give the surface the identity.

The design uses a compact drawstring form with a wide opening and shoulder straps, while a dragonfly-inspired wing pattern gives the bag its character.

06 — FORM, FIT & FUNCTION

Sized for the gloves, shaped for the routine.

The proportions stay compact rather than becoming a full gym bag, while the wide mouth makes loading easier and the long straps support shoulder carry.

IMAGE:

GLOVES → OPEN BAG → CLOSED BAG → ON-BODY

07 — DESIGN LANGUAGE

Sport utility, translated through craft.

Warm leather, a restrained silhouette and geometric wing lines move the bag away from conventional sports-accessory styling while keeping the product visually clean.

IMAGE: Dragonfly wing reference → graphic pattern → leather surface.

08 — MATERIAL & MAKING

The material became part of the identity.

Genuine leather was selected for its balance of durability, flexibility and visual character. Stitching and surface treatments were explored as both construction techniques and opportunities for expression.

IMAGE: Leather sample + stitching + etched/embossed motif.

09 — PROTOTYPE → FINAL

The first version was built to test the form before committing to leather.

A machine-stitched muslin prototype was used to study the opening and overall construction before developing the final leather bag.
